Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant argued that Albonesi does not teach or suggest "cache memory sections capable of switching between an ordinary state and a power consumption state- much less when each is capable of such switching". Examiner disagreed and pointed out that Albonesi teaches selectively disabling cache ways to reduce power consumption, thereby saving energy. Applicant proposed to amend the claims to include that each cache section includes "a power control unit" rather than "a central power control unit". It appears that the proposed amendment overcomes the rejection of the claims over Farrell and Albonesi.
